

## Hygiene

Cleanliness is everything when it comes to fresh flower vase life. To maximize your customer experiences keep the following hygiene tips in mind.

DCD is our recommended cleaner as it is more stable than bleach and does not evaporate.

- 1) Recut flowers using a sterile cutting tool, tools should be cleaned in DCD at least twice a day and more often depending upon use.
- 2) Clean buckets after every use. Do not rinse off the cleaner as it has a residual effect that provides protection.
- 3) Clean work surfaces and design benches daily with DCD.
- 4) Clean cooler walls and floors weekly with DCD. Airflow in your cooler will spread bacteria and fungus to walls and back to your flowers.
- 5) Delivery vehicles and delivery containers should be cleaned on a regular basis.
